Applause Meter decides Song Contest Festival

The Acoustilyzer AL1 serves as an applause meter for shows, such as the annual Song Contest Festival in Feldkirch, Austria. The event stages daring hobby and leisure-time stars, who truly understand to cheer up their audience. The competition result is based on the generated applause level. Indeed, the Song Contest winner is determined by the average applause level over 10 seconds.

The event manager Thomas Rauch reports: "With the level measurement of the Acoustilyzer, the competition result accurately matches the spectators' applause level here in the Poolbar in Feldkirch. In the past using older methods, a short loud burst by a single person affected the results heavily. Here meets the Acoustilyzer exactly our requirements for an applause meter."

Applause level up to 106.2 dB!

Thomas Rauch invites all "normal" people to participate at this annual happening, which features two classes of entries – Solo or Group. A professional band supports the artists, who step into roles ranging from KISS to the amazing Smurfs. Thus they provide a pure variety on entertainment. The Acoustilyzer measures the applause in the SPL mode "SINGLE" and 10 seconds cycle time. Most of the artists reach an applause of about 100 dB Leq. This year's winner however achieved even 106.2 dB Leq!
