October, 2009

Red Square Audio takes first NTi Audio XL2

Paul Nicholson from Red Square Audio became the first person to purchase the brand new XL2 Audio and Acoustic Analyzer at PLASA 2009. He was so impressed with the XL2 that he took it away at the end of the show.

The XL2 got already heavily used at a concert for SPL and FFT mapping and for RT60 and STI-PA measurements at a prestigious installation project on behalf of an audio consultancy company. Paul comments: "The XL2 is a brilliant audio tool. It's really simple to use and gives me quick, accurate measurements of all the required audio parameters. The packaging is also first class from the handsets, accessories, to the rugged metal case. Recording and reporting is also simple and clear enabling me to print out reports on site. I can't think of a better pro audio measurement system".

Berno Nigsch of NTi Audio replies: "Red Square Audio received the first XL2 Audio and Acoustic Analyzer straight from the factory. Their loyalty for many years to high quality measurement solutions of NTi Audio has been awarded with the proud first ownership. The XL2 forms the unique combination of a state-of-the-art Sound Level Meter, a comprehensive Acoustical Analyzer as well as a powerful Audio Analyzer. The wide range of functionalities is tailored for Live Sound, Installed Sound, Studios, Service and Environmental Noise measurements."

XL2 Audio and Acoustic Analyzer

A remarkable advantage of the XL2 is the flexible user interface. The measurement screens may be personalized and only a limited subset of the comprehensive functionalities enabled for simplified operator interfaces. Advanced users may access all menus, settings and store their preferred measurement configurations. The XL2 provides together with the measurement microphones M4260 or M2210 a precise sound level meter for monitoring of live sound events and environmental noise. Further measurement functions for an in-depth acoustical analysis and audio signal verifications complement the XL2.
