

NTi Audio AG is a leading manufacturer of measurement instruments and solutions for audio, acoustics and vibration applications. At our headquarters in Schaan, Liechtenstein, we develop, manufacture and distribute measurement solutions for acoustic consultants, building physicists, sound reinforcement systems in public spaces as well as test equipment for the professional audio industry and industrial quality control.

In order to strengthen our development team, we are looking for a

Embedded Firmware Developer (m/f/d – EU or Swiss citizen)

Your Main Tasks

- Responsible realisation of measuring device firmware from concept to development and optimisation.
- Quality assurance with the help of automated tests in our CI/CD environment.
- Working in a embedded environment.

Your Skills

- Higher education in the field of software / electronics.
- Experience in embedded firmware development.
- Solid knowledge and skills with C++, Python, GIT and Embedded Linux.
- Independent, structured and self-reliant work.

What We Offer

- An extremely varied range of tasks with an international clientele.
- An open, trusting working atmosphere and very flexible working hours.
- A team of experienced developers with a passion for good sound.
- A designated family-friendly environment.
- Open-Door Policy.
